Professional organizations of which he is a member include the American College of Physicians, American Medical Association and the American College of Chest Physicians.

## What to expect at a sleep study.

When you arrive at our sleep center, you are welcomed by our highly qualified technicians and shown to your comfortable bedroom. The sleep study process will be explained, and you will have an opportunity to ask questions. Before the study starts, you will be guided through every step so you are comfortable with the process and your surroundings.

As you enter sleep, we will monitor you with our state-of-the-art equipment. While sensors are attached to your body, a sleep specialist will observe your sleep patterns, brain waves, eye movements, breathing, oxygen levels, heart rate, muscle activity, and more. While sleeping with multiple sensors might seem difficult, most patients find they fall asleep very easily. The sleep study can be completed and clinical findings are sent to your physician.
